The pages in this Practice Book can be assigned in order to provide practice with key skills during each unit of the Bridges in Mathematics curriculum. The pages can also be used with other elementary math curricula. If you are using this Practice Book with another curriculum, use the tables of pages grouped by skill (iii–x) to assign pages based on the skills they address, rather than in order by page number.

*Bridges in Mathematics* is a standards-based K–5 curriculum that provides a unique blend of concept development and skills practice in the context of problem solving. It incorporates the Number Corner, a collection of daily skill-building activities for students.

The Math Learning Center is a nonprofit organization serving the education community. Our mission is to inspire and enable individuals to discover and develop their mathematical confidence and ability. We offer innovative and standards-based professional development, curriculum, materials, and resources to support learning and teaching. To find out more, visit us at www.mathlearningcenter.org.

## Unit Four: Geometry & Measurement

**Use anytime after Session 10**
- Multiplying by 10, 100 & 1,000
- Money & Minutes
- Writing Improper Fractions as Mixed Numbers
- Area Problems
- Multiplication & Division Puzzles
- Using Partial Products to Solve Multiplication Problems
- Greater Than & Less Than
- Using the Standard Multiplication Algorithm
- Two Different Multiplication Methods
- Kylie's Babysitting Money

**Use anytime after Session 21**
- More Partial Products
- Toothpicks & Leaves
- Reasonable Estimates & Partial Products
- Multiplication Story Problems
- Multiplication Round & Check
- Cherry Tomatoes & Cafeteria Tables
- Using the Standard Algorithm & Partial Products to Multiply
- Raffle Tickets & Exercise Minutes
- Using the Standard Algorithm to Multiply Large Numbers
- Bread & Paper

## Unit Five: Probability & Data Analysis

**Use anytime after Session 10**
- More Fractions & Division
- Favorite Fruit Graph
- Spinner, Tile & Marble Fractions
- Probability Experiments
- Eating Our Vegetables
- Fair Spinners
- Multiplication & Division Practice
- Area & Perimeter, Time & Money
- Prizes for Student Helpers
- Probability Experiments with Tile & Marbles

**Use anytime after Session 18**
- Calendar Problems
- Dog Bone Graph
- Division & Elapsed Time
Unit Six: Fractions & Decimals

Use anytime after Session 10
Fractions & Mixed Numbers
Pizza Problems
Using Fractions on a Number Line to Solve Problems
Time Conversions
Showing Fractions in Simplest Form
Weight Conversions
Simplifying Fractions
Capacity Conversions
Fraction Practice
Length Conversions

Use anytime after Session 22
Decimals & Fractions
Running Problems
Using Pictures to Compare Decimals & Fractions
From Home to School & Back
Ordering Decimals & Fractions
Pencils & Paint
Rounding Decimals & Fractions to the Nearest Whole Number
Decimal & Fraction Story Problems
Comparing Decimals & Fractions
More Decimal & Fraction Story Problems

Unit Seven: Algebraic Thinking

Use anytime after Session 10
Area Problems
Thinking about Area
Solving Equations
Writing & Solving Equations
What’s the Rule?
Number Patterns & Divisibility
Ounces, Cups, Pints, Quarts & Gallons
Find or Write the Matching Equation
Thinking about Number Patterns
The Paper Problem
Unit Eight: Wingspans  Measurement & Data Analysis

Use anytime after Session 10
The Vegetable Eating Contest  131
Room 108’s Fruit Graph  132
Two Different Kinds of Data  133
How Tall Are We?  134
Estimate or Exact Measurement?  135
Multiplication Review  136
Decimal & Fraction Riddles  137
Jeff’s Wallpaper Problem  138
Multiplication, Area & Perimeter Review  139
Tiling the Kitchen Floor  140
Bridges in Mathematics Grade 4 Practice Book Blacklines

There are 140 blacklines in this document, designed to be photocopied to provide fourth grade students with practice in key skill areas, including:

- multi-digit addition and subtraction (computation and word problems)
- multiplication and division facts
- multi-digit multiplication (computation and word problems)
- representing, comparing, and ordering fractions and decimals
- computational estimation
- patterns and equations
- area and perimeter
- elapsed time and money
- graphing and data analysis
- problem solving

This set of blacklines also includes the following materials for the teacher:

- This introduction
- A complete listing of the student pages grouped by skill (see pages iii–x)
- Answer Keys (see pages xi–xxxii)

**Note** These teacher materials are not included in the bound student version of the Practice Book, which is sold separately.

While the Practice Book pages are not integral to the Bridges Grade 4 program, they may help you better address the needs of some or all of your students, as well as the grade-level expectations in your particular state. The Practice Book pages may be assigned as seatwork or homework after Bridges sessions that don't include Home Connections. These pages may also serve as:

- a source of skill review
- informal paper-and-pencil assessment
- preparation for standardized testing
- differentiated instruction

Every set of 10 pages has been written to follow the instruction in roughly half a Bridges unit. Practice pages 1–10 can be used any time after Unit One, Session 10; pages 11–20 can be used any time after Unit One, Session 21; and so on. (There are only 10 pages to accompany Units 7 and 8 because these are shorter units, usually taught toward the end of the school year.) Recommended timings are noted at the top of each page. If you are using this Practice Book with another curriculum, use the lists that follow to assign pages based on the skills they address.

Many odd-numbered pages go naturally with the even-numbered pages that immediately follow them. Often, students will practice a skill on the odd-numbered page and then apply that skill to solve story problems on the following even-numbered page. (See pages 1–4, for example.) In these cases, you may...
find that it makes good sense to assign the two pages together. Before sending any page home, review it
closely and then read over it with your students to address confusion and define unfamiliar terms in ad-
vance. Some of the problems on certain pages have been marked with a Challenge icon. These problems
may not be appropriate for all the students in your classroom; consider assigning them selectively.

Page 84, Probability Experiments
1  \( \frac{3}{8} \) or \( \frac{1}{4} \) (Other acceptable answers include: 2 out of 8 chances, 1 out of 4 chances.)
2  Chris has a better chance of getting a gray tile from the large bowl than the small bowl. Explanations will vary. Example: Half the tiles in the large bowl of 240 are gray because 120 is half of 240. Only \( \frac{3}{8} \) or \( \frac{1}{4} \) of the tiles in the small bowl are gray. So his chances are only 2 out of 8, which is less than 1 out of 2.
3  \( \frac{3}{10} \) or \( \frac{1}{5} \) (Other acceptable answers include: 2 out of 10 chances, 1 out of 5 chances.)
4  a  (challenge) 4 would need to be black. Explanations will vary. Example: 20 is twice as much as 10. If you want the chances to stay the same, you have to double the number of black marbles. \( 2 \times 2 = 4 \).
   b  (challenge) 20 would need to be black. Explanations will vary. Example: 2 is \( \frac{1}{5} \) of 10. 20 is \( \frac{1}{5} \) of 100. The chances have to be 2 out of 10, or \( \frac{1}{5} \).

2  100 students; explanations will vary. Example:
   \( \frac{1}{4} + \frac{1}{3} = \frac{7}{12} \)
   \( 12/12 - 7/12 = \frac{5}{12} \)
   \( 240 \div 12 = 20 \)
   \( 20 \times 5 = 100 \)

1 a \( \frac{1}{8} \) (Other acceptable responses include \( \frac{1}{2} \), 1 out of 2, half, 4 out of 8.)  
   b 120; explanations will vary. Example: 4 out of 8 is half, so to keep the probability the same, half the tiles have to be white. Half of 240 is 120.

1 Yes; explanations will vary. Example: \(2.4 = \frac{24}{10}\).
\(\frac{4}{10} > \frac{1}{4}\), so 2.4 pounds will be more than enough.
2 No; explanations will vary. Example: \(\frac{3}{4} = 3.75\),
and \(.75 > .6\), so 3.6 pounds is not enough.
3 Yes; explanations will vary. Example: \(13\frac{1}{2} = 13.5\).

2 George put apples into bags to sell at the farmers market. He put 5 apples into each bag. He had 45 apples altogether. How many bags did he fill?

\[45 ÷ 5 = a\]

He put 9 apples in each bag.

\[a = 9\]

3 Mr. James had 16 bookmarks to give to the 4 students in his reading group. How many bookmarks did each student get if they all got the same number of bookmarks?

\[16 ÷ 4 = b\]

Each kid got 4 bookmarks.

\[b = 4\]

4 Serafina had 30 stickers. She gave the same number of stickers to each of her 3 friends. Now she has 18 stickers left. How many stickers did she give to each friend?

\[30 - (3 \times \underline{s}) = 18\]

She gave 4 to each friend.

Page 140, Tiling the Kitchen Floor

1 Jean and Mike are covering their kitchen floor with big tiles. The floor is 21 feet long and 17 feet wide. The tiles they are using are each 1 foot wide and 3 feet long. Each tile weighs 5 pounds. The tiles come in packages of 10 that each cost $120. How much will it cost them to cover their floor with these tiles?
   a Responses will vary. Example: How much will Jean and Mike have to pay for the tiles they need?
   b & c See above.
   d $1,440.00
Use after Unit Eight, Session 10 (cont.)

Page 140, Tiling the Kitchen Floor (cont.)

2 Responses will vary. Example: The floor is 357 square feet. The tiles are 3 square feet. If you divide 360 by 3, you get 120. That's 12 packages of 10 tiles. 12 × 120 = $1,440.00 so I know I'm right, even though they'll have one tile left over.

Centimeters, Decimeters & Meters

The information below will help you solve Problems 1–3.
- There are 10 centimeters in 1 decimeter.
- There are 10 decimeters in 1 meter.

1a Luis and Sara measured their heights in centimeters.
Luis was 132 cm tall, and Sara was 148 cm tall. What is the sum of their heights in centimeters? Show your work.

b What is the sum of their heights in decimeters? Show your work.

2 The snail crawled 1 meter in the morning, 4 decimeters after lunch, and 60 centimeters before falling asleep. How far did the snail crawl altogether? Express your answer in centimeters, decimeters, and meters. Show your work.

a The snail crawled _______ centimeters.
b The snail crawled _______ decimeters.
c The snail crawled _______ meters.

CHALLENGE

3a Sidney Snail crawled two and a half meters in a half hour. Sherman Snail crawled 487 centimeters in an hour. Who crawled farther, Sidney or Sherman? How much farther? Show your work.

b Which snail was faster? Explain your answer.

Sandwiches, Pizza & Books

1 Rodney had a friend over on Saturday. His dad took them out for sandwiches. Each person (Rodney, his dad, and his friend) got a sandwich for $6. How much did they spend on sandwiches altogether? Show all your work.

2 Jasmine had a pizza party with 3 of her friends to celebrate the last day of school. They ordered 2 pizzas. Each pizza had 8 slices. They all ate the same amount of pizza and finished both pizzas. How many pieces did each person eat? Show all your work.

3 There were 12,387 books in the school library. The librarian bought 445 more books to add to the library and put 126 books on the Give Away shelf near the office. How many books are in the library now? Show all your work.
All in the Family

1 Fill in the missing number in each triangle. Then write the facts in the fact family.

**example**

```

Flowers, Shells & Cards

1 Lisa, Imani, and Carla, and were picking flowers for their aunt. If they each picked 8 flowers, how many flowers did they pick altogether? Show all your work.

2 Frank collected 18 beautiful shells for his 3 cousins. If he gave each cousin the same number of shells, how many shells did each cousin get? Show all your work.

CHALLENGE

3 Four friends were making cards to sell at the holiday sale. Each friend made 9 cards. They put all their cards together and then bundled them in groups of 6 cards to sell. How many bundles of 6 cards did they have to sell? Show all your work.
Multiples & Multiplication Facts

1. When you count by a number, you are naming the multiples of that number. For example, if you skip count by 5’s, you are naming the multiples of five: 5, 10, 15, 20, 25, and so on. In each sequence below, fill in the missing multiples.

   | 5, 10, 15, _20_, 25, 30, _35_ | 3, 6, ___, 12, 15, 18, ___, 24 |
   | 6, ___, 18, ___, 30 | 9, 18, ___, 36, 45, ___, 63 |

2. Circle all the multiples of the number in each box.

   | 5  | 16  | 20  | 15  | 42  | 36  | 45  | 18 |
   | 2  | 5  | 6 | 7 | 8 | 14 | 21 | 10 |
   | 4 | 8 | 6 | 14 | 16 | 20 | 28 | 19 |
   | 3 | 28 | 32 | 48 | 16 | 60 | 72 | 19 |
   | 7 | 22 | 33 | 21 | 14 | 16 | 42 | 35 |
   | 3 | 21 | 35 | 18 | 36 | 44 | 12 | 29 |

3. Fill in the missing numbers.

   \[
   \begin{align*}
   9 \times 9 &= 81 \\
   3 \times 9 &= 27 \\
   4 \times 4 &= 16 \\
   2 \times 6 &= 12 \\

Tasty Treats

1 Joseph works at an ice cream stand. He sold 5 milkshakes per hour on Saturday. If he worked for 8 hours, how many milkshakes did he sell on Saturday? Show all your work.

2 On the last day of school, Mr. Jackson brought in some cookies for the 6 students in his reading group. He had a box with 15 cookies in it and, to be fair, he gave each student the same number of cookies. How many cookies did each student get? Show all your work.

3 At her farm stand, Judy had 126 pounds of lettuce, 267 pounds of corn, and 155 pounds of tomatoes. She sold 83 pounds of lettuce, 182 pounds of corn, and 86 pounds of tomatoes. How many pounds of vegetables does she have left? Show all your work.
Arrays & Factors

1. Draw and label a rectangular array to show two factors for each number. Do not use 1 as one of your factors. Then write the fact family that goes with your array.

**Example**

\[ \begin{array}{c}
\begin{array}{c}
2 \\
4 \\
\end{array} \\
\begin{array}{c}
2 \times 4 = 8 \\
4 \times 2 = 8 \\
8 \div 4 = 2 \\
8 \div 2 = 4 \\
\end{array}
\end{array} \]

The Big Race & the Walk-a-Thon

1 Hannah is running in big race that is 27 kilometers long. If she runs 9 kilometers per hour, how long will it take her to run the race? Show all your work.

2 Peter is in a walk-a-thon. He walks about 5 kilometers per hour. If he walks for 6 hours, about how far will he walk? Show all your work.

3 There are 32 students in Ms. Lopez’s fourth grade class. If she made 2 equal groups of students, there would be 16 students in each group. What are the other ways she could divide the students into equal groups? Show all your work.
Area & Perimeter

1. Find the area and perimeter of each rectangle. Area is the total amount of space covered by the rectangle. Perimeter is the distance around the rectangle.

**Example**

- **a**
  - Perimeter: $3 + 3 + 5 + 5 = 16$ units
  - Area: $3 \times 5 = 15$ square units

- **b**
  - Perimeter: ____________
  - Area: ____________

- **c**
  - Perimeter: ____________
  - Area: ____________

**Challenge**

2. Find the area and perimeter of this shape. Show all your work.

- Perimeter: ____________
- Area: ____________
Area & Perimeter Story Problems

You can make sketches to help solve the problems below. Remember to include the units of measurement in your answers. Show all of your work.

1a  The classroom rug is 9 feet long and 8 feet wide. What is the total area of the rug?

b  What is the perimeter of the rug?

2a  Chrissy is going to make a big painting on a piece of wood that is 4 feet wide and 7 feet long. What is the total area of the piece of wood?

b  What is the perimeter of the piece of wood?

3  The school playground measures 465 feet by 285 feet. What is the perimeter of the playground?
Place Value & Perimeter

1 Write each number below in standard form.

**example** twenty-three thousand, five hundred six \( \underline{23,506} \)

a nine thousand, two hundred forty-eight ______________________

b seventeen thousand, six hundred thirty-three ______________________

Money & Stadium Seats

1 Mr. Parker was buying presents for his sons. He spent one hundred thirty-six dollars on a remote controlled car for George. He spent fifty-nine dollars on a video game and twelve dollars on a book for Carl. How much more money did Mr. Parker spend on George’s present than on Carl’s? Show all your work.

2 The stadium can hold twenty thousand people. If seventeen thousand, four hundred ninety-six people came to a game at the stadium, how many empty seats were there? Show all your work.

CHALLENGE

3 Jasmine wants to buy a car that costs six thousand, five hundred dollars. She has four thousand, six hundred sixty-five dollars in the bank. Her grandmother offered to give her five hundred dollars to help pay for the car. How much more money does Jasmine need to buy the car? Show your work.
Time after Time

1 Show what time it would be 25 minutes after the time on the first clock.

2 Show what time it would be 15 minutes before the time shown on the first clock.

3 Show what time it would be 35 minutes after the time shown on the first clock.

CHALLENGE

4 Show two times that are 85 minutes apart.
Time & Distance Problems

1a It takes 10 minutes to bake a batch of cookies. Simon plans to bake 7 batches of cookies. How long will it take? Write your answer in hours and minutes. Show all your work.

2a A spider is crawling on a street. It took the spider 3 hours to crawl 3000 centimeters. On average, how many centimeters did the spider crawl each hour? Show all your work.

b There are 100 centimeters in a meter. On average, how many meters did the spider crawl each hour? Show all your work.

CHALLENGE
b If Simon starts baking at 2:45 pm, what time will he be done? You can use the clock below to help figure it out. Show all your work.

CHALLENGE
c If the spider crawled for an hour and a half, how many meters would it crawl? Explain your answer.
Number Riddles

1. Draw a line to show which number matches each description. The first one is done for you.

   **example** This number has a 2 in the thousands place. 46,305

   a. This is an even number with a 6 in the hundreds place. 32,617
   b. This number is equal to 30,000 + 4,000 + 80 + 2. 45,052
   c. This number is 1000 less than 46,052. 19,628
   d. This is an odd number with a 6 in the thousands place. 34,082

2. Write each number in words.

   **example** 17,329 \(\text{seventeen thousand, three hundred twenty-nine}\)

   a. 33,072
   b. 86,105
   c. 74,629

**CHALLENGE**

3. Write an even number that has a 7 in the hundreds place, has an odd number in the thousands place, and is a multiple of 10.
The Arcade & the Animal Shelter

1. Rene is going to the arcade to play video games. She has 9 quarters in her pocket. How much money does she have altogether?
   
a. Write the question in your own words below.
   
   The question I am being asked to answer is...

b. Solve the problem. Show all your work.

2. Lin is collecting money for the animal shelter. Five of his friends each gave him a dime and a nickel. How much money did they give Lin altogether?
   
a. Write the question in your own words below.
   
   The question I am being asked to answer is...

b. Solve the problem. Show all your work.
## Counting Coins & Bills

1. Write each money amount in decimal form. You can draw loops around groups of coins that make it easier for you to find the total amount.

   **Example:** $0.37

   - a
   - b
   - c
   - d
   - e

2. Write each money amount in decimal form.

   **Example:** 1 dollar bill, 5 quarters, 3 pennies

   - a 3 dollar bills, 9 nickels, 2 pennies
   - b 6 quarters, 2 dimes, 4 pennies
   - c 3 quarters, 6 nickels, 7 pennies
   - d 4 dollar bills, 3 half dollars, 7 nickels
   - e 2 dollar bills, 7 quarters, 16 pennies

**Challenge:**

- f 12 quarters, 80 nickels, 97 pennies
- g 24 quarters, 140 nickels, 30 dimes, 45 pennies
How Much Change?

1 Sharon bought a bottle of iced tea that cost $1.65. She paid for it with a $5 bill. How much change did she get back? Show all your work.

2 Toshi bought a magazine that cost $3.89. He paid for it with a $10 bill. How much change did he get back? Show all your work.

3 Apples are on sale for 99¢ per pound. Mr. James bought 6 pounds of apples and paid for them with a $10 bill. How much change did he get back? Show all your work.
# Multiplying with Money

1 Use the arrays of coins to help solve each multiplication problem below. Show all your work.

- **Example**
  
  \[
  \begin{array}{c}
  \text{example} \\
  \text{12} \\
  \times 5 \\
  \hline
  60
  \end{array}
  \]

  \[
  \begin{array}{c}
  \text{5} \times 4 = 20 \quad \text{20} \\
  \text{5} \times 4 = 20 \quad +20 \\
  \text{5} \times 4 = 20 \\
  \hline
  60
  \end{array}
  \]

- **a**
  
  \[
  \begin{array}{c}
  \text{15} \\

Money & Miles Per Hour

1 Jamil earns $12 per hour. He worked 5 hours yesterday. How much money did he earn? Show all your work.

2 Ramona was riding her bike at 13 miles per hour. She biked for 3 hours. How many miles did she go? Show all your work.

CHALLENGE

3 Jamil earns $12 per hour. He worked 25 hours last week. How much money did he earn? Show all your work.
Fill the Frames

Label each array frame below. Then fill it in with labeled rectangles. Write an addition equation to show how you got the total. Then write a multiplication equation to match the array.

Apricots & Carrots

1. Gregory bought some apricots for his 3 sisters. Each apricot cost 15¢. He bought 3 apricots for each sister. How much did he spend altogether? Show all your work.

2. Lucia is buying carrots that are 75¢ per pound. How much would 3 pounds of carrots cost? Show all your work.

CHALLENGE

3. Nancy is doing laundry in her apartment building. It costs $1.00 to run the washing machine and $1.25 to run the dryer. Nancy has 27 quarters. How many loads of laundry can she put through the washer and dryer? Show all your work.

The Information You Need

Sometimes story problems include information that you don’t need to solve the problem. Read the problems below carefully to see which information is extra.

1 Emilio has $125. He wants to buy a new video game system that usually costs $312 but is on sale for $289. He wants to borrow money from his brother so that he can buy it while it is on sale. How much money will Emilio need to borrow to buy the game system while it is on sale?

a Restate the question in your own words.

b Underline the information in the problem you do need to solve the problem.

c Cross out the information in the problem you don’t need to solve the problem.

d Solve the problem. Show all your work.

2 Marie had a $5 bill, three $1 bills, 2 quarters, and 3 pennies in her pocket. She bought a bottle of juice for 89¢ and an apple for 65¢. If she paid with two $1 bills, how much change did she get back?

a Restate the question in your own words.

b Underline the information in the problem you do need to solve the problem.

c Cross out the information in the problem you don’t need to solve the problem.

d Solve the problem. Show all your work.
Fractions of a Foot

1. Write two names for each fraction of a foot. You can draw on the rulers to help.

   **example**
   
<table>
<thead>
<tr>
<th>Equivalent Fraction</th>
<th>Number of Inches</th>
</tr>
</thead>
<tbody>
<tr>
<td>[\frac{3}{12}]</td>
<td>1</td>

<tbody>
<tr>
<td>[\frac{12}{12}]</td>
<td>1</td>
</tr>
<tr>
<td>[\frac{10}{10}]</td>
<td>1</td>
</tr>
</tbody>
</table>

2. Shade the ruler to show each fraction of a foot. Then write another name for the fraction. You can draw lines to divide the rulers into equal parts.

   **example**
   
<table>
<thead>
<tr>
<th>Equivalent Fraction</th>
<th>Number of Inches</th>

More Fractions of a Foot

1 Write the number of inches in each fraction of a foot. You can look at page 41 to help.

a \(\frac{1}{2}\) of a foot is equal to ________ inches  
b \(\frac{1}{4}\) of a foot is equal to ________ inches

c \(\frac{1}{6}\) of a foot is equal to ________ inches  
d \(\frac{1}{3}\) of a foot is equal to ________ inches

2 Write the number of inches in each fraction of a foot. Use the rulers below and the information in problem 1 to help. Then circle the greater fraction in each pair. If they are equal, circle them both.

<table>
<thead>
<tr>
<th>Example</th>
<th>(\frac{1}{2})</th>
<th>(\frac{1}{4})</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>6 inches</td>
<td>3 inches</td>

</thead>
<tbody>
<tr>
<td>(\frac{2}{3})</td>
<td>(\frac{1}{2})</td>
</tr>
<tr>
<td>(\frac{2}{3})</td>
<td>(\frac{3}{4})</td>
</tr>
<tr>
<td>(\frac{1}{4})</td>
<td>(\frac{2}{3})</td>
</tr>
</tbody>
</table>

3 Write all the factors of each number. Hint: *Think about pairs of factors that multiply to make the number.*

<table>
<thead>
<tr>
<th>ex 18</th>
<th>1, 2, 3, 6, 9, 18</th>
<th>a 12</th>
</tr>

Comparing Fractions on a Number Line

When you are comparing fractions, it can help to think about how close those fractions are to landmarks like one whole and one-half. Use the number line to help complete the problems below.

1. Complete the table.

<table>
<thead>
<tr>
<th>Circle the fraction that is greater than $\frac{1}{2}$</th>
<th>Write a number sentence showing which fraction is greater.</th>
</tr>
</thead>
<tbody>
<tr>
<td>example $\frac{4}{6}$</td>
<td>$\frac{1}{4}$</td>
</tr>
<tr>
<td>a $\frac{2}{6}$</td>
<td>$\frac{2}{3}$</td>
</tr>
<tr>
<td>b $\frac{1}{3}$</td>
<td>$\frac{5}{6}$</td>
</tr>
</tbody>
</table>

2. Complete the table.

<table>
<thead>
<tr>
<th>Circle the fraction that is closest to 1.</th>
<th>Write a number sentence showing which fraction is greater.</th>
</tr>
</thead>
<tbody>
<tr>
<td>a $\frac{3}{4}$</td>
<td>$\frac{2}{3}$</td>
</tr>
<tr>
<td>b $\frac{5}{6}$</td>
<td>$\frac{2}{3}$</td>
</tr>
<tr>
<td>c $\frac{3}{4}$</td>
<td>$\frac{5}{6}$</td>

Egg Carton Fractions

1 Solve the following multiplication and division problems. They might help you think about the egg cartons in problem 2.

\[
\begin{align*}
12 \div 2 &= \_ \_ \_ \\
12 \div 3 &= \_ \_ \_ \\
12 \div 4 &= \_ \_ \_ \\
12 \div 6 &= \_ \_ \_
\end{align*}
\]

\[
\begin{align*}
6 \times 3 &= \_ \_ \_ \\
4 \times 2 &= \_ \_ \_ \\
3 \times 3 &= \_ \_ \_ \\
2 \times 5 &= \_ \_ \_
\end{align*}
\]

2 Write a fraction to show the amount of each egg carton that is filled with eggs. The cartons are divided into equal parts for you.

\[
\begin{array}{ll}
a & \frac{1}{4} \\
b & \frac{3}{4} \\
c & \frac{5}{6} \\
d & \frac{1}{3} \\
e & \frac{2}{3} \\
f & \frac{3}{4}
\end{array}
\]

3 Write greater than (>) or less than (<) to show which fraction is greater. If they are equal, write an equal sign (=).

\[
\begin{array}{ccc}
ex \ a & \frac{1}{4} & < \frac{1}{2} \\
ex \ b & \frac{1}{2} & > \frac{1}{3} \\
a & \frac{4}{6} & \frac{2}{3} \\
b & \frac{1}{3} & \frac{1}{4} \\
c & \frac{3}{4} & \frac{5}{6} \\
d & \frac{1}{3} & \frac{3}{4} \\
e & \frac{1}{2} & \frac{2}{4} \\
f & \frac{2}{3} & \frac{3}{4} \\
g & \frac{2}{6} & \frac{1}{3}
\end{array}
\]
More Egg Carton Fractions

1 Write at least two fractions to show the part of each egg carton that is filled. Draw lines on the egg cartons to divide them into equal parts.

2 Fractions can be greater than one. If a fraction greater than one is written as a whole number with a fraction, it is called a mixed number. If it is written as a fraction, it is called an improper fraction. Draw on the egg cartons to divide them into equal parts. Then write a mixed number and an improper fraction to show how many full egg cartons there are.
Comparing & Ordering Fractions

1 Write the fractions below in order from least to greatest. You can use the egg cartons to help compare the fractions. Hint: First figure out which fractions are greater than 1.

\[ \frac{1}{2}, \frac{5}{3}, \frac{3}{4}, \frac{1}{3}, \frac{7}{4}, \frac{2}{3}, \frac{3}{2}, \frac{1}{4} \]

Least __________ __________ __________ __________ __________ __________ __________ Greatest

2 Fill in the missing fractions or whole numbers on the number line.

3 Fill in the missing fractions or whole numbers on the number line.

CHALLENGE

4 Which fraction is greater, \( \frac{3}{4} \) or \( \frac{8}{9} \)? How do you know?

5 Which fraction is greater, \( \frac{5}{4} \) or \( \frac{10}{9} \)? How do you know?
Fractions & Mixed Numbers on a Number Line

1 Use the number line to answer the questions below.

Example a What improper fraction is equal to 2 \(\frac{1}{4}\)? In other words, how many fourths are in two and one-fourth? \(\frac{9}{4}\)

Example b What number is halfway between 2 and 3? \(2\frac{1}{2}\)

Example a What improper fraction is equal to 1 \(\frac{1}{2}\)? In other words, how many halves are in one and one-half?

Example b What mixed number is equal to \(\frac{6}{4}\)?

Example c Which is greater, \(\frac{5}{4}\) or \(1\frac{1}{2}\)?

Example d What mixed number is equal to \(\frac{13}{4}\)?

Example e What improper fraction is equal to \(2\frac{1}{2}\)? In other words, how many halves are in two and one-half?

Example f Which is greater, \(1\frac{3}{4}\) or \(\frac{5}{4}\)?

2 Challenge

What number is halfway between 0 and 1?

What number is halfway between 0 and 3?

What number is halfway between 0 and 17?
Fraction Story Problems

Draw pictures to help answer the questions below. Circle your answer to each question.

1. Jim had a piece of string that was three-fourths of a foot long. Damien had a piece of string that was half a foot long. Whose string was longer? How much longer was it? Use a labeled sketch, as well as numbers and/or words, to prove your answer.

2. Rosa and Jasmine were trying to run a kilometer (1 kilometer is equal to 1000 meters). Rosa made it halfway. Jasmine made it one-third of the way. Who ran farther? Use a labeled sketch, as well as numbers and/or words, to prove your answer.

3. Lisa and her brother Darius were eating small pizzas. Their mom cut each pizza into fourths. Lisa figured out that she ate one and a half little pizzas. Darius counted that he ate seven fourths. Who ate more pizza? How much more? Use a labeled sketch, numbers, and/or words to prove your answer.
Clock Fractions

Sometimes people talk about time in fractions of an hour. For example, a quarter of an hour is 15 minutes. Half an hour is 30 minutes. The pictures below show some different fractions of an hour on clocks.

\[ \frac{1}{2} \text{ hour is 30 minutes} \quad \frac{1}{4} \text{ hour is 15 minutes} \quad \frac{1}{3} \text{ hour is 20 minutes} \]

1. Problem 2 will be easier if you can divide 60 by some other numbers. Solve the division problems below.
   a. \[ 60 \div 2 = \_ \_ \_ \]  
   b. \[ 60 \div 3 = \_ \_ \_ \]  
   c. \[ 60 \div 4 = \_ \_ \_ \]  
   d. \[ 60 \div 6 = \_ \_ \_ \]

2. Draw the following fractions on the clocks. Then write how many minutes are in each fraction of an hour.

<table>
<thead>
<tr>
<th>Fractions of an Hour</th>
<th>Picture on a Clock</th>
<th>How Many Minutes?</th>
</tr>
</thead>

Time & Fractions

1 Use the clocks below to help answer the questions. Show all your work and circle your answers.

a Hiroko spent half an hour on her homework. Her sister Mai spent four-sixths of an hour on her homework. Who spent more time doing homework?

b The sisters started doing their homework at 4:45 in the afternoon. What time did Hiroko finish?

C What time did Mai finish?

More Time & Distance Problems

1 Mr. Jackson stayed for an hour after school to help his students with their math homework. Four students came in for help. If Mr. Jackson spent the same amount of time helping each student and used up the whole hour, how much time did he spend with each student? Express your answer both as a fraction of an hour and as a number of minutes. Show your work.

Mr. Jackson spent _______ of an hour with each student.
Mr. Jackson spent _______ minutes with each student.

Sharing Problems

1 Kendra and Veronica's aunt gave them $19 to spend at the store. If they split the money evenly, how much did they each get to spend? Use labeled sketches, numbers, and/or words to solve this problem. Show all your work.

2 Frank had 42 shells that he wanted to share with his 4 friends. If he gave each friend the same number of shells (and kept the same number of shells for himself), how many shells did each person get? Use labeled sketches, numbers, and/or words to solve this problem. Show all your work.

3 Joe's grandma lives 36 blocks up the street from Joe. On Saturday, Joe rode his bike two-thirds of the way to his grandma's house and then realized he forgot the present he was going to give her. Joe rode back to his house, got the present, and rode all the way to his grandma's house. Then he rode straight home. How many blocks did Joe ride altogether? Use labeled sketches, numbers, and/or words to solve this problem. Show all your work.

Money & Minutes

1  Brianna earns $1,000 per month at her job. She used to make $800 per month. If she works only for the months of June, July, and August, how much money will she make?

   a  Restate the question in your own words:

   b  Underline the information in the problem you do need to solve the problem.

   c  Cross out the information in the problem you don’t need to solve the problem.

   d  Solve the problem. Show all your work.

2  Jonah is 18 years old. It takes him 50 minutes to ride his bike to work and 50 minutes to ride his bike home every day. If he worked 6 days last week, how many minutes did he spend riding his bike to and from work?

   a  Restate the question in your own words:

   b  Underline the information in the problem you do need to solve the problem.

   c  Cross out the information in the problem you don’t need to solve the problem.

   d  Solve the problem. Show all your work.

   e  How many hours did Jonah spend riding his bike to and from work? Show your work.
Writing Improper Fractions as Mixed Numbers

1 Complete the multiplication facts.

\[

8 & 8 & 80 & 80 \\
\times 7 & \times 70 & \times 7 & \times 70 \\
\end{array}
\]

2 Write each fraction as a whole number or a mixed number. Some of the problems are done for you as examples. You can draw on the egg cartons to help.

\[
\begin{array}{cccc}
\frac{3}{3} = \quad \frac{6}{3} = \quad 2 \quad \frac{4}{3} = \quad \frac{5}{3} = \\
\frac{7}{3} = \quad 2\frac{1}{3} \quad \frac{6}{6} = \quad \frac{12}{12} = \quad \frac{18}{12} = \\
\frac{6}{6} = \quad \frac{12}{6} = \quad \frac{8}{6} = \quad \frac{9}{6} = \\
\end{array}
\]

Bread & Paper

1. Five days a week, Marion bakes eight dozen loaves of bread and delivers them to 3 sandwich shops. Each shop gets the same number of loaves. In 3 weeks, how many loaves of bread does each sandwich shop get from Marion? Show all your work.

2a. A piece of paper measures 36 inches by 24 inches. The teacher wants to cut the paper into 9 equal pieces for her students. The dimensions of the 9 pieces of paper must be whole numbers of inches. What could the dimensions of the 9 identical pieces of paper be? There are two possibilities. Use labeled sketches, numbers, and/or words to solve this problem. Show all your work.

b. What must the area of each of the 9 pieces of paper be? Use pictures, numbers, and/or words to explain your answer.
More Fractions & Division

1 Write a fraction to show how much of each circle is filled in.

\[
\begin{array}{cccc}
\text{example} & a & b & c \\
\begin{array}{c}
\text{\includegraphics{circle1.png}} \\

2 Solve the following division problems. The answers can help you with problem 3.

\[
\begin{array}{cccc}
24 \div 2 = \_\_\_ & 24 \div 4 = \_\_\_ & 24 \div 8 = \_\_\_ & 24 \div 3 = \_\_\_ \\
240 \div 2 = \_\_\_ & 240 \div 4 = \_\_\_ & 240 \div 8 = \_\_\_ & 240 \div 3 = \_\_\_
\end{array}
\]

3 You can use what you know about division to find different fractions of a number.

\text{example} \quad \text{Half of 24 is } \frac{12}{2}.

\[
\begin{array}{cccc}
a & b & c & d \\
\text{One-third of 24 is } \_\_\_. & \text{One-eighth of 24 is } \_\_\_. & \text{One-fourth of 24 is } \_\_\_. & \text{One-third of 240 is } \_\_\_.

CHALLENGE
Favorite Fruit Graph

The people working in the cafeteria wanted to know what fruit students like best. They asked the 240 students in the school to pick their favorite fruit. The results are shown on the circle graph below.

1 Which was the most popular fruit?

2 Did more students select peaches or apples?

3 Which two fruits are favored by the same number of students?

4 Exactly half of the students said watermelon was their favorite fruit. What number of students said watermelon was their favorite fruit? (There are 240 students altogether.) Show your work.

5 Exactly one-fourth of the students said peaches were their favorite fruit. What number of students said peaches were their favorite fruit? Show your work.

6 Exactly one-eighth of the students said strawberries were their favorite fruit. What number of students said strawberries were their favorite fruit? Show your work.
Spinner, Tile & Marble Fractions

1 What fraction of each spinner is shaded in?

Probability Experiments

1. Chris is going to close his eyes, reach into this bowl, and pull out just 1 tile. What is the probability that it will be gray?

2. Chris is going to close his eyes, reach into a bowl with 240 tiles, and pull out just 1 tile. If 120 of those tiles are gray, does he have a better or worse chance of getting a gray tile than he did with the small bowl above? Explain your answer.

3. Jackie is going to close her eyes, reach into this bag, and pull out just 1 marble. What is the probability that it will be black?

CHALLENGE

4a. Jackie is putting together another bag of marbles. She wants the chances of drawing a black marble to be exactly the same as they were for the bag above. If she puts 20 marbles in the new bag, how many of them would need to be black? Explain your answer.

b. If she puts 100 marbles in the new bag, how many of them would need to be black? Explain your answer.
Eating Our Vegetables

1 Mrs. Watson’s class is trying to eat more vegetables at lunch. This bar graph shows how many students in her class ate vegetables each day for a week.

How many students does each box on the graph represent?

How many students ate vegetables on Friday?

How many students ate vegetables on Wednesday?

There are 24 students in the class. On which day(s) did at least half of the class eat vegetables?

On which day did exactly two-thirds of the class eat vegetables? Explain your answer.

2 Two hundred forty students were asked to choose their favorite vegetable. This circle graph shows the results. Exactly one-fourth of the students picked peas, and exactly one-third picked carrots. How many students said broccoli was their favorite vegetable? Use labeled sketches, numbers, and/or words to explain your answer.
Fair Spinners

1a  Amber and Brandon are going to play a game. They are using a spinner to see who gets to go first. If the spinner lands on A, Amber goes first. If the spinner lands on B, Brandon goes first. Circle the spinner that gives each player the same chance of going first.

- [ ] A
- [ ] B
- [ ] A
- [ ] B

b  Brandon didn't think the spinners above were very interesting, so he made the spinner shown below. Is this spinner fair? Explain your answer.

- [ ] A
- [ ] B
- [ ] A
- [ ] B

2a  Willie, Brett, and Rico are playing a game. They need to make a spinner to decide who gets a point each time. Willie gets a point if the spinner lands on white. Brett gets a point if the spinner lands on blue. Rico gets a point if the spinner lands on red. Sketch a spinner that would be fair for these 3 players. Then explain why it is fair.

- [ ] A
- [ ] B
- [ ] A
- [ ] B

b  Sketch a different spinner that would be fair for the 3 players. Explain why it is fair.

Darryl’s Present

Making an estimate before solving a problem can help you decide if your answer is reasonable. Make an estimate, solve the problem, and then use your estimate to help decide if your answer makes sense.

Darryl makes $12 an hour. He wants to earn $180 to buy a really nice present for his mom. He worked 3 hours last week and 5 hours this week. How many hours will he have to work next week in order to earn enough money to buy the present?

1 Use rounding or another strategy to make a reasonable estimate before you solve the problem.
   a I know the answer will be greater than __________.
   b I know the answer will be less than __________.

2 Solve the problem. Show all your work.

3 Is your answer reasonable? How can you tell?
**Enough Information to Solve the Problem?**

Choosing a Strategy

Before you start working on a problem, it can help to decide what strategy you will use to solve it. Choose a strategy that will help you solve this problem. Explain your choice. Then solve the problem and double-check your answer.

1. A rectangle has a perimeter of 24 centimeters. It is 2 centimeters longer than it is wide. What is the width of the rectangle? What is the length of the rectangle?

a. Fill in the bubble to show which strategy you will use to solve this problem.

- make an organized list
- draw a picture
- look for a pattern
- use logical reasoning

b. Explain why you chose this strategy.

c. Solve the problem. Show all your work.

d. Double-check your answer.
Find the Missing Information

Each problem below is missing some information that you need to solve it. For each problem, select the information you need to solve it. Then solve the problem.

1 Miguel is getting groceries. He got a loaf of bread, a carton of milk for $2.50, and 3 apples that cost 60¢ each. If he pays with a $10 bill, how much change will he get back?

   a Fill in the bubble beside the information you need to solve the problem.

      ○ The loaf of bread  ○ The bread cost $2.  ○ Miguel is 11 years old.
      had 20 slices.

   b Solve the problem. Show all your work.

2 Lisa wants to put carpet squares on the floor in her bedroom. Each carpet square covers 1 square foot, and they cost $5 for a package of 4 squares. How much will it cost Lisa to buy enough carpet squares to cover her bedroom floor?

   a Fill in the bubble beside the information you need to solve the problem.

      ○ Lisa has $200 to spend.  ○ Lisa's room is 9 ft. by 11 ft.  ○ The squares come in cases of 20 packages.

   b Solve the problem. Show all your work.
Family Math Night

Making an estimate before solving a problem can help you decide if your answer is reasonable. Make an estimate, solve the problem, and then use your estimate to help decide if your answer makes sense.

1 Ms. Suarez and her students are hosting a math night for the students’ families. They estimate that it will take them 20 minutes to set up, an hour and a half to do the activities, and 45 minutes to clean up. If they start setting up at 3:30 p.m., what time will they be done cleaning up?

a Use rounding or another strategy to make a reasonable estimate before you solve the problem.

b Solve the problem. Show all your work. You can use the blank clocks if you want to.

c Is your answer reasonable? How can you tell?
Fractions & Mixed Numbers

1. The circles below are divided into equal parts. Write two fractions to show what part of each circle is filled in.

   - Example
     
     \[
     \begin{array}{cccc}
     \text{fraction} & \frac{1}{2} & \frac{2}{4} \\
     \end{array}
     \]

   - a
     
     \[
     \begin{array}{cccc}
     \text{fraction} & \frac{3}{8} & \frac{5}{8} \\
     \end{array}
     \]

   - b
     
     \[
     \begin{array}{cccc}
     \text{fraction} & \frac{6}{10} & \frac{4}{10} \\
     \end{array}
     \]

   - c
     
     \[
     \begin{array}{cccc}
     \text{fraction} & \frac{7}{12} & \frac{5}{12} \\
     \end{array}
     \]

   - d
     
     \[
     \begin{array}{cccc}
     \text{fraction} & \frac{9}{16} & \frac{7}{16} \\
     \end{array}
     \]

   - e
     
     \[
     \begin{array}{cccc}
     \text{fraction} & \frac{11}{20} & \frac{9}{20} \\
     \end{array}
     \]

2. The circles below are divided into equal parts. Write a fraction and a mixed number to show how many circles are filled in.

   - Example
     
     \[
     \begin{array}{cccc}
     \text{fraction} & \frac{3}{2} & \text{mixed number} & 1\frac{1}{2} \\
     \end{array}
     \]

   - a
     
     \[
     \begin{array}{cccc}
     \text{fraction} & \frac{5}{8} & \text{mixed number} & 1\frac{3}{8} \\
     \end{array}
     \]

   - b
     
     \[
     \begin{array}{cccc}
     \text{fraction} & \frac{7}{10} & \text{mixed number} & 2\frac{1}{10} \\
     \end{array}
     \]

   - c
     
     \[
     \begin{array}{cccc}
     \text{fraction} & \frac{9}{12} & \text{mixed number} & 1\frac{1}{12} \\
     \end{array}
     \]

3. Fill in the missing fractions or mixed numbers.

Pizza Problems

1. The pizzas at Little Tom’s are cut into 8 pieces. Lucy ate \( \frac{1}{2} \) of a pizza and Alex ate \( \frac{3}{8} \) of a pizza. Who ate more pizza? How much more? Use pictures, numbers, and/or words to explain how you know.

2. On Friday night, the Suarez family ate \( 2 \frac{3}{4} \) pizzas. Their neighbors, the Johnson family, ate \( \frac{17}{8} \) of a pizza. Which family ate more pizza? How much more? Use pictures, numbers, and/or words to explain how you know.

3. Which is greater, \( \frac{82}{8} \) or \( \frac{37}{4} \)? Explain how you know. Hint: Think about how many eighths and how many fourths are in one whole.
Using Fractions on a Number Line to Solve Problems

1 Use the number line above to help answer these questions.

a Celia ran $\frac{5}{6}$ of a mile. Jade ran $1 \frac{1}{4}$ mile. Who ran farther?

b Lester has a piece of rope that is $\frac{9}{6}$ of a foot long. Dario has a piece of rope that is $1 \frac{1}{3}$ of a foot long. Whose piece of rope is longer?

c Table A is $1 \frac{2}{3}$ of a yard long. Table B is $\frac{11}{6}$ of a yard long. Which table is longer?

2 Put the following fractions in order from smallest to greatest. Hint: Think about landmarks. Which fractions are less than one-half? Which fractions are close to 1?

\[
\begin{array}{cccccccc}
& \frac{1}{4} & \frac{7}{6} & \frac{3}{4} & \frac{1}{2} & \frac{1}{12} & \frac{7}{8} & \\

Showing Fractions in Simplest Form

1 Write all the factors of each number below. Think of the factors in pairs.

example 2  1, 2  a  4  ______________  b  8  ______________
c  3  ______________  d  6  ______________  e  12  ______________

2 Factors can help you think about equivalent fractions. When you can divide the numerator and the denominator by the same number, you can simplify a fraction. If you divide the numerator and denominator by the greatest factor they have in common (the greatest common factor), you can show the fraction in its simplest form. Look carefully at the example below. Then fill in the rest of the table.

1 Keiko wants to buy mechanical pencils for all 25 of her classmates. Mechanical pencils come in packages of 6 that each cost $2.99. If Keiko has $12 in her pocket, can she buy enough mechanical pencils right now? Show all your work.

2 On Spring Cleanup Day, the fourth graders are going to paint the hallways in the school. They measured the walls and figured out that they have 4,800 sq. feet to paint. They want to paint half of the walls green and half yellow. Each gallon of green paint covers 250 sq. feet and costs $30. Each gallon of yellow paint covers 250 sq. feet and costs $32. How much will it cost them to buy enough paint to paint the hallways? Show all your work.
Rounding Decimals & Fractions to the Nearest Whole Number

1 Write the decimal and fraction numbers where they belong on the number line below.

\[
\begin{array}{cccc}
0.25 & \frac{9}{5} & 1.05 & \frac{3}{4} \\
0 & 1 & 2 & \\
\end{array}
\]

2 Write the decimal and fraction numbers where they belong on the number line below.

\[
\begin{array}{cccc}
0.75 & \frac{7}{5} & 7.05 & 5\frac{7}{10} \\
0 & 1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 & \\
\end{array}
\]

3 When you round a fraction or decimal number to the nearest whole number, you look to see whether it is closer to the whole number above it or below it. If the fraction or decimal part of the number is equal to or greater than one-half, round up. If it is less than one-half, round down. Round these numbers to the nearest whole number. You do not have to write an explanation.

\[
\begin{array}{ll}
ex a & 0.75 \quad 1 \\
0.75 \text{ rounds up to } 1 \text{ because the decimal part of the number (0.75) is greater than one-half.} & \\

Decimal & Fraction Story Problems

1 Breanna is having a barbecue with her family. They need to get $2\frac{1}{4}$ pounds of ground beef for everyone to have a hamburger. Breanna found a package of ground beef at the store that was 2.4 pounds. Would that be enough ground beef for their family? Explain your answer.

2 Bob is making jam. He needs $3\frac{3}{4}$ pounds of strawberries. He put a box of berries on the scale at the farm stand. The scale said “3.6 pounds.” Is that enough strawberries? Explain your answer.

3 Leilani’s mom said that they could stop for a snack sometime after they had driven $13\frac{1}{2}$ miles. The trip meter on their car shows 13.8 miles. Can they stop for a snack now?
### Comparing Decimals & Fractions

More Decimal & Fraction Story Problems

1. Elisa needs a total of $5\frac{1}{2}$ pounds of berries for some pies she is making. She already has 3 pounds of berries at home. At the market, she found a package of raspberries that weighs 1.15 lbs. and a package of marrionberries that weighs 1.56 lbs. If she buys these two packages of berries, will she have enough berries altogether? Explain your answer.

2. Ming and Enrico are trying to see who can run the most in a week. Ming ran 2.7 miles on Monday, 2.5 miles on Wednesday, and 3.4 miles on Friday. The perimeter of the playground is half a mile. Enrico ran around the playground 17 times on Friday. Who ran farther, Ming or Enrico? Explain your answer.

Solving Equations

1 Fill in the missing number in each equation. You do not need to explain your answers.

**example** 30 + ____ = 34  The missing number must be 4, because 30 + 4 = 34.

<p>| | |</p>
<table>

<tr>
<td>c</td>
<td>32 = _____ × 4</td>
</tr>
<tr>
<td>d</td>
<td>_____ ÷ 6 = 7</td>
</tr>
<tr>
<td>e</td>
<td>40 = _____ − 8</td>
</tr>
<tr>
<td>f</td>
<td>4 + _____ = 90</td>
</tr>
</tbody>

Ounces, Cups, Pints, Quarts & Gallons

1 Fill in the following equivalencies for measurements of capacity.
   a There are ______ fluid ounces in 1 cup.  
   b There are ______ cups in 1 pint.  
   c There are ______ pints in 1 quart.  
   d There are ______ cups in 1 quart.  
   e There are ______ quarts in 1 gallon.  
   f There are ______ pints in 1 gallon.

2 Ben filled his lawn mower’s gas tank. It holds 5 gallons of gas. How many fluid ounces is that? Show all your work.

3 Jenny has a big watering can that holds 2 gallons of water. She filled it up and then used \( \frac{3}{4} \) of the water to water the plants on her front porch. Then she went to the back porch. On the way, she poured 2 more quarts of water into the watering can. She used 1 pint of the water to water the plants on her back porch. How much water was left in her watering can? Show all your work.
Find or Write the Matching Equation

1 Draw a line from each problem situation to the equation that best matches it.

a Nina had 2 cats. One of the cats had kittens and now Nina has 8 cats. How many kittens did they have? \[8 \div k = 2\]

b Tim had 8 kites. He gave them to his friends. Each friend got 2 kites. How many friends did Tim give kites to? \[8 - k = 2\]

c Kaylee had 8 keys on her keychain. She got rid of some of them, and now she has 2 keys left. How many keys did she get rid of? \[2 \times k = 8\]

d Takumi was tying knots. He tied the same number of knots on 2 different pieces of string. When he was done, he had tied 8 knots. How many knots did he tie on each piece of string? \[2 + k = 8\]

2 Write an equation, inequality, or expression to show each situation.

example Joe and Keira were putting their money together to buy a present for their mom. Joe had $15 and together they had more than $30. \[15 + k > 30\]

a Esteban was organizing his rock collection. He put the same number of rocks into each box. He had 30 rocks and 5 boxes. How many rocks did he put into each box?

b Ebony made 9 bracelets. She gave each of her 3 friends the same number of bracelets. How many bracelets did each friend get?

c Gregory had $45. His sister asked to borrow some money. Gregory gave her some money, but he still had more than $30 left.
Thinking about Number Patterns

1 Fill in the missing numbers in each count-by sequence below.

a 32, 34, 36, 38, 40, ________, ________, ________, ________, ________, ________

b 35, 40, 45, 50, 55, ________, ________, ________, ________, ________, ________

c 40, 50, 60, 70, 80, ________, ________, ________, ________, ________, ________

2 List three things that you know must be true of any whole number that ends in 0.

3 Nia says that any multiple of 6 must also be a multiple of 2 and 3. Explain why you agree or disagree with her. Hint: Remember that you can use count-by patterns to think about multiples.
The Paper Problem

1 Shanice and Micah are using yellow craft paper to cover a bulletin board. The board is 11 feet wide and 7 feet tall. The craft paper comes in a roll that is 1 yard wide. They can roll it out and cut it to any length, but the paper will always be 1 yard wide. Draw and label on the bulletin board pictures below to show 2 different ways Shanice and Micah can cover the bulletin board.

**a** First way.

```

The Vegetable Eating Contest

The students in rooms 106 and 108 decided to have a contest to see which classroom ate the most vegetables. Each day for a week they kept track of the number of students from each room who ate vegetables. This double bar graph shows their results. There are 24 students in each class.

1. How many students does each box on the graph represent?

2. How many students from room 108 ate vegetables on Thursday?

3. On which day or days did the same number of students from each room eat vegetables?

4. On which day or days did more students from room 108 eat vegetables?

5. Which class did a better job of eating vegetables? Use evidence from the graph to explain your answer.
Room 108’s Fruit Graph

1 The students in room 108 wanted to see how many of them ate fruit each day at lunchtime. They kept track of how many students in their class ate fruit each day for two weeks. (They did not have school on Monday of the second week.) Their results are shown in the table below. Use the data in the table to complete the bar graph. You will need to:

b What is the range in the data (the difference between the lowest and highest numbers)?

c What is the mode of the data (the number(s) that appears most frequently)?

d What is the median number (the numbers in the middle when the data is listed from lowest to highest)?
Two Different Kinds of Data

Categorical data breaks a population (of a class or a school, for example) into categories or groups. People often use surveys to collect categorical data. Numerical data is based on taking measurements. You can find the range and median of numerical data, but you can’t for categorical data.

For each set of data described below, decide whether it is categorical or numerical. Then choose the unlabeled graph that best represents it.

2a What is the range in the friends’ heights? (Range is the difference between the highest and lowest values.)

b Write a sentence explaining what the range tells you about the friends’ heights.

3a What is the mode of the friends’ heights? (Mode is the value that appears most frequently in the set of data.)

b Write a sentence explaining what the mode tells you about the friends’ heights.

4a What is the median in the friends’ heights? (If you have an odd number of numbers, the Median is the middle number when the numbers are listed from lowest to highest.)

b Write a sentence explaining what the median tells you about the friends’ heights.
Estimate or Exact Measurement?

1 Read the situations below carefully. Write E if an estimate is good enough. Write M if an exact measurement is necessary.

a _____ Isaac is buying some items at the store. He has $20 in his pocket. Does he need to know exactly how much the items cost altogether, or can he estimate to see if he has enough money?

b _____ Tiffany is making a frame for her favorite picture. Does she need to measure the picture exactly to know how big her frame should be, or can she estimate?

c _____ Martin has some chores he needs to do on Saturday. His friend wants to know if he can come over to play at 4:30. Does Martin need to know exactly how long he will spend on each chore, or can he estimate to see if he will be done in time to play with his friend?

d _____ Jin is baking cookies. Can he estimate the amount of flour he puts in the recipe, or does he need to measure it out exactly?

e _____ Mrs. Suarez is making some curtains for her living room. Can she estimate how big her windows are, or should she measure them to figure out exactly how wide and tall they are before she starts cutting her fabric?

2 Describe a time you needed to take an exact measurement. What were you doing? What tool did you use to measure? What unit of measurement did you use?

3 Describe a time you made an estimate. How did you make your estimate? For example, did you use rounding and friendly numbers? Did you think about what you already knew?

2. Find the area and perimeter of each figure below.

   **a**
   
   Area = ________
   Perimeter = ________

   **b**
   
   Area = ________
   Perimeter = ________

   **c**
   
   Area = ________
   Perimeter = ________

3. On a separate piece of paper, draw and label a rectangle with an area of 32 square units and a perimeter of 36 units. Use numbers and/or words to show that you are correct. Attach the piece of paper to this page.
Tiling the Kitchen Floor

1 Jean and Mike are covering their kitchen floor with big tiles. The floor is 21 feet long and 17 feet wide. The tiles they are using are each 1 foot wide and 3 feet long. Each tile weighs 5 pounds. The tiles come in packages of 10 that each cost $120. How much will it cost them to cover their floor with these tiles?
